Step 1 of 3

How firm should ThumbStall be?

Pick a starting point. You can change any of it later.

- ○ **Gentle**
  A 6-second pause before apps you pick. No limits.

- ◉ **Balanced** Recommended
  A 10-second pause, Reels and Shorts filtered, and 10 minutes of short video a day.

- ○ **Focused**
  Pauses grow with each open, daily limits, and a work or study schedule.

Why a few seconds works
Most opens happen on autopilot. A short pause is enough to notice, and closing is always one tap.

Step 2 of 3

What ThumbStall needs, and why

Everything stays on this phone.

Usage access

Needed

Tells ThumbStall which app just opened, so it can show the pause.

✓ Granted

Accessibility

Optional

Only for Feed filter: spots Reels and Shorts screens and steps back out. ThumbStall never reads your messages, typing or passwords.

Turn on

Skip for now

Keep it running

Recommended

Some phones stop background apps to save battery. We'll open the right setting for your phone.

Subscriptions and search still work

T TikTok

The whole app is a feed, so it uses your short-video allowance.

If an app update breaks a filter, the app opens normally and ThumbStall lets you know. It never blocks your messages.

Need a break from ThumbStall?

Snooze it. Protection turns back on by itself, so you don't have to remember.

15 minutes — Back on at 1:40 PM

1 hour — Back on at 2:25 PM

Until tonight — Back on at 9:00 PM

Snooze for 15 minutes
